I am going to speak about snorkeling. and whether it should be allowed near coral reefs. Snorkeling is very important because you know the different kinds of fishes and their different habitats. For me, snorkelling is an activity that must be practised. It helps you learn and you know different things, such as many kinds of fish and all its features.

For diving, there is a need all kinds of things about snorkelling and be well informed to know how to practise. In some waters this activity is practiced better than others because there are more variety of fish species. The snorkeling is a sporting activity that is penetrating in the sea, a river, lake or at any depth submarine. The snorkeling should be allowed done because you can make a research on the depths or fish or other things.

The snorkeling is a will, but that presents risks that can be dangerous on the part of its practitioners. We must have an adequate preparation to make this kind of sport.

????? ?????? ???? 1ºA

You are not answering the topic. I didn’t ask you to write an essay about what snorkeling is. This is a position (opinion) paper. You should have written about your opinion on the danger that snorkeling can cause to coral reefs and whether or not snorkeling should be permitted. You must give reasons to support your opinion and write a conclusion at the end. Two pictures are also missing.
