SNORKELING YES OR NO

I am going to write about whether it is good or bad when the people to snorkel in coral reefs.

On the one hand, it is good, because it favours the tourism and increases the wealth of the zone, and this is good for the inhabitants of the place, increasing their standard of life. Also, it helps people knowing reefs better, the fish and the marine species that inhabit it.

But, on the other hand, in my opinion, it is bad, because the coral is in danger; for several causes: contamination of waters, the climatic change, the manufactures and the incontrolled extract— from uncontrolled extraction. The increase in temperature causes the loss of its colour of coral (by abandonment of symbiotic seaweed) and this is a cause of its death. The excessive fishing has caused the disappearance of fish that eat bad seaweed and this increases the microbes that make the coral ill. The irresponsible tourism aids to the disappearance of coral.

They were the operators of snorkeling of “Key West (Florida) those that send the program “Reef Relie” to keep out the anchors of the boats far from the reef. they that flies and scienticiary. But there are good people, volunt. This paragraph is not pertinent to support your opinion.

For that reason, I believe that if the objective is scientific and its is do controlled—and minority, yes I think it would be possible to be allowed some controlled scientific snorkeling, but not for the general tourism.
